ACADEMIC PROJECTS

Marathi translation using word sense disambiguation (BE Project)

This project aims to work on Word Sense Disambiguation (WSD) which is the biggest challenge in NLP. In which we focus mainly on Language Translation problem. We have studied different models and compare them to get the approach with better accuracy.

Tools - NLTK 3.2.1, Flask 0.11, Marathi Wordnet

Hospitality Management Project

The project focus on the different activities in hospital which consist of different modules. The project includes the details about the hospital staff, and to book an appointment for contacting the respective doctor.

Technology Stack - HTML, JS ,CSS, PHP,MySQL

Sentiment Analysis of Product Reviews

In this project, we have developed an application that results the sentiment of each product as positive, negative, or neutral. It also shows the percentage graph for each of them. This application is used for CRM's to check the views about the particular product so that they can decide whether to put the product in the flash sale and at what cost.

Technology Stack - Python, Java
